

## NAT 4/5 DESIGN UNIT Lettering Development sheet

Open Adobe PHOTOSHOP on the menu at the bottom of the screen. Go to FILE and select NEW then BLANK FILE. You should now type in your name and class then click OK. Make sure the pre-set size is A4 or international paper size.

Click on the  to select the font tool from the tool box on the left hand side. Now choose a font to use from the TEXT menu at the top of the page then click somewhere on the page and type your name and class in the top right hand of the page. Make the font size **36pt.** no bigger or it will not be able to fit on your box or ipad layout.

Type **Hollister** Now highlight this, go to the EDIT menu and COPY or (ctrl + c). Now click somewhere on the page and then EDIT and PASTE or (ctrl + v). Do this process so that you have about 10 examples to work on. Use up the whole page but leave enough space so that you can manipulate the layout shape.

Now change some of the FONTS by highlighting and then choosing a different font from the TEXT menu. Use a variety of styles. Have fun with the lettering styles and try as many effects as you can by trying warping the text. (See next step).

Now go to **CREATE WARPED TEXT** icon  on the right hand side of the menu bar. Click this and then click on the arrows beside NONE on the new pop up.

Click on styles to get a list of effects that you can try out. The best ones to use are **FLAG** or **WAVE**. You should remember that you are trying to find a suitable style for your sign. It should still be easily read but be interesting to look at.

**Before you finish remember to save what you have done in your own drive, and then from your drive put your work into the Art drop box, in the subject drive.**

**If you do not do this you will lose your work and may have to redo it!!**
